

## SELL SHEET

# RFID BOX Tunnel 500C

The RFID Box Tunnel 500C enables you to read RFID encoded and tagged items within boxes or cartons prepared for distribution.

Designed for fast-processing environments, it features an integrated conveyor, RFID shielding to eliminate stray reads, and light and sound indicators. It is ideal for box tag reading and verification in automated or semi-automated environments.

## MAIN FEATURES

### ALL-IN-ONE

Includes a built-up touchscreen display, an integrated conveyor system, a shielding door, and light and sound signaling.

### RFID SHIELDING

Avoids noise and stray tag reads to ensure reliable performance in demanding operational settings.

### HIGH CAPACITY AND PERFORMANCE

For automated or semi-automated environments, the tunnel is built for high-volume box-tag reading and verification.

**Up to 300 items**  
read per box\*

\*Based on label performance, item material and quantity, and operational conditions.

**Up to 400 boxes**  
read per hour\*

**14" touchscreen**  
16:9

**Swivel arm**  
for optimal screen positioning.
